10 min

→ API :- application Programming Interface

features of Asyn Code

→ clean & concise

→ better error handling

→ Earlier bugging

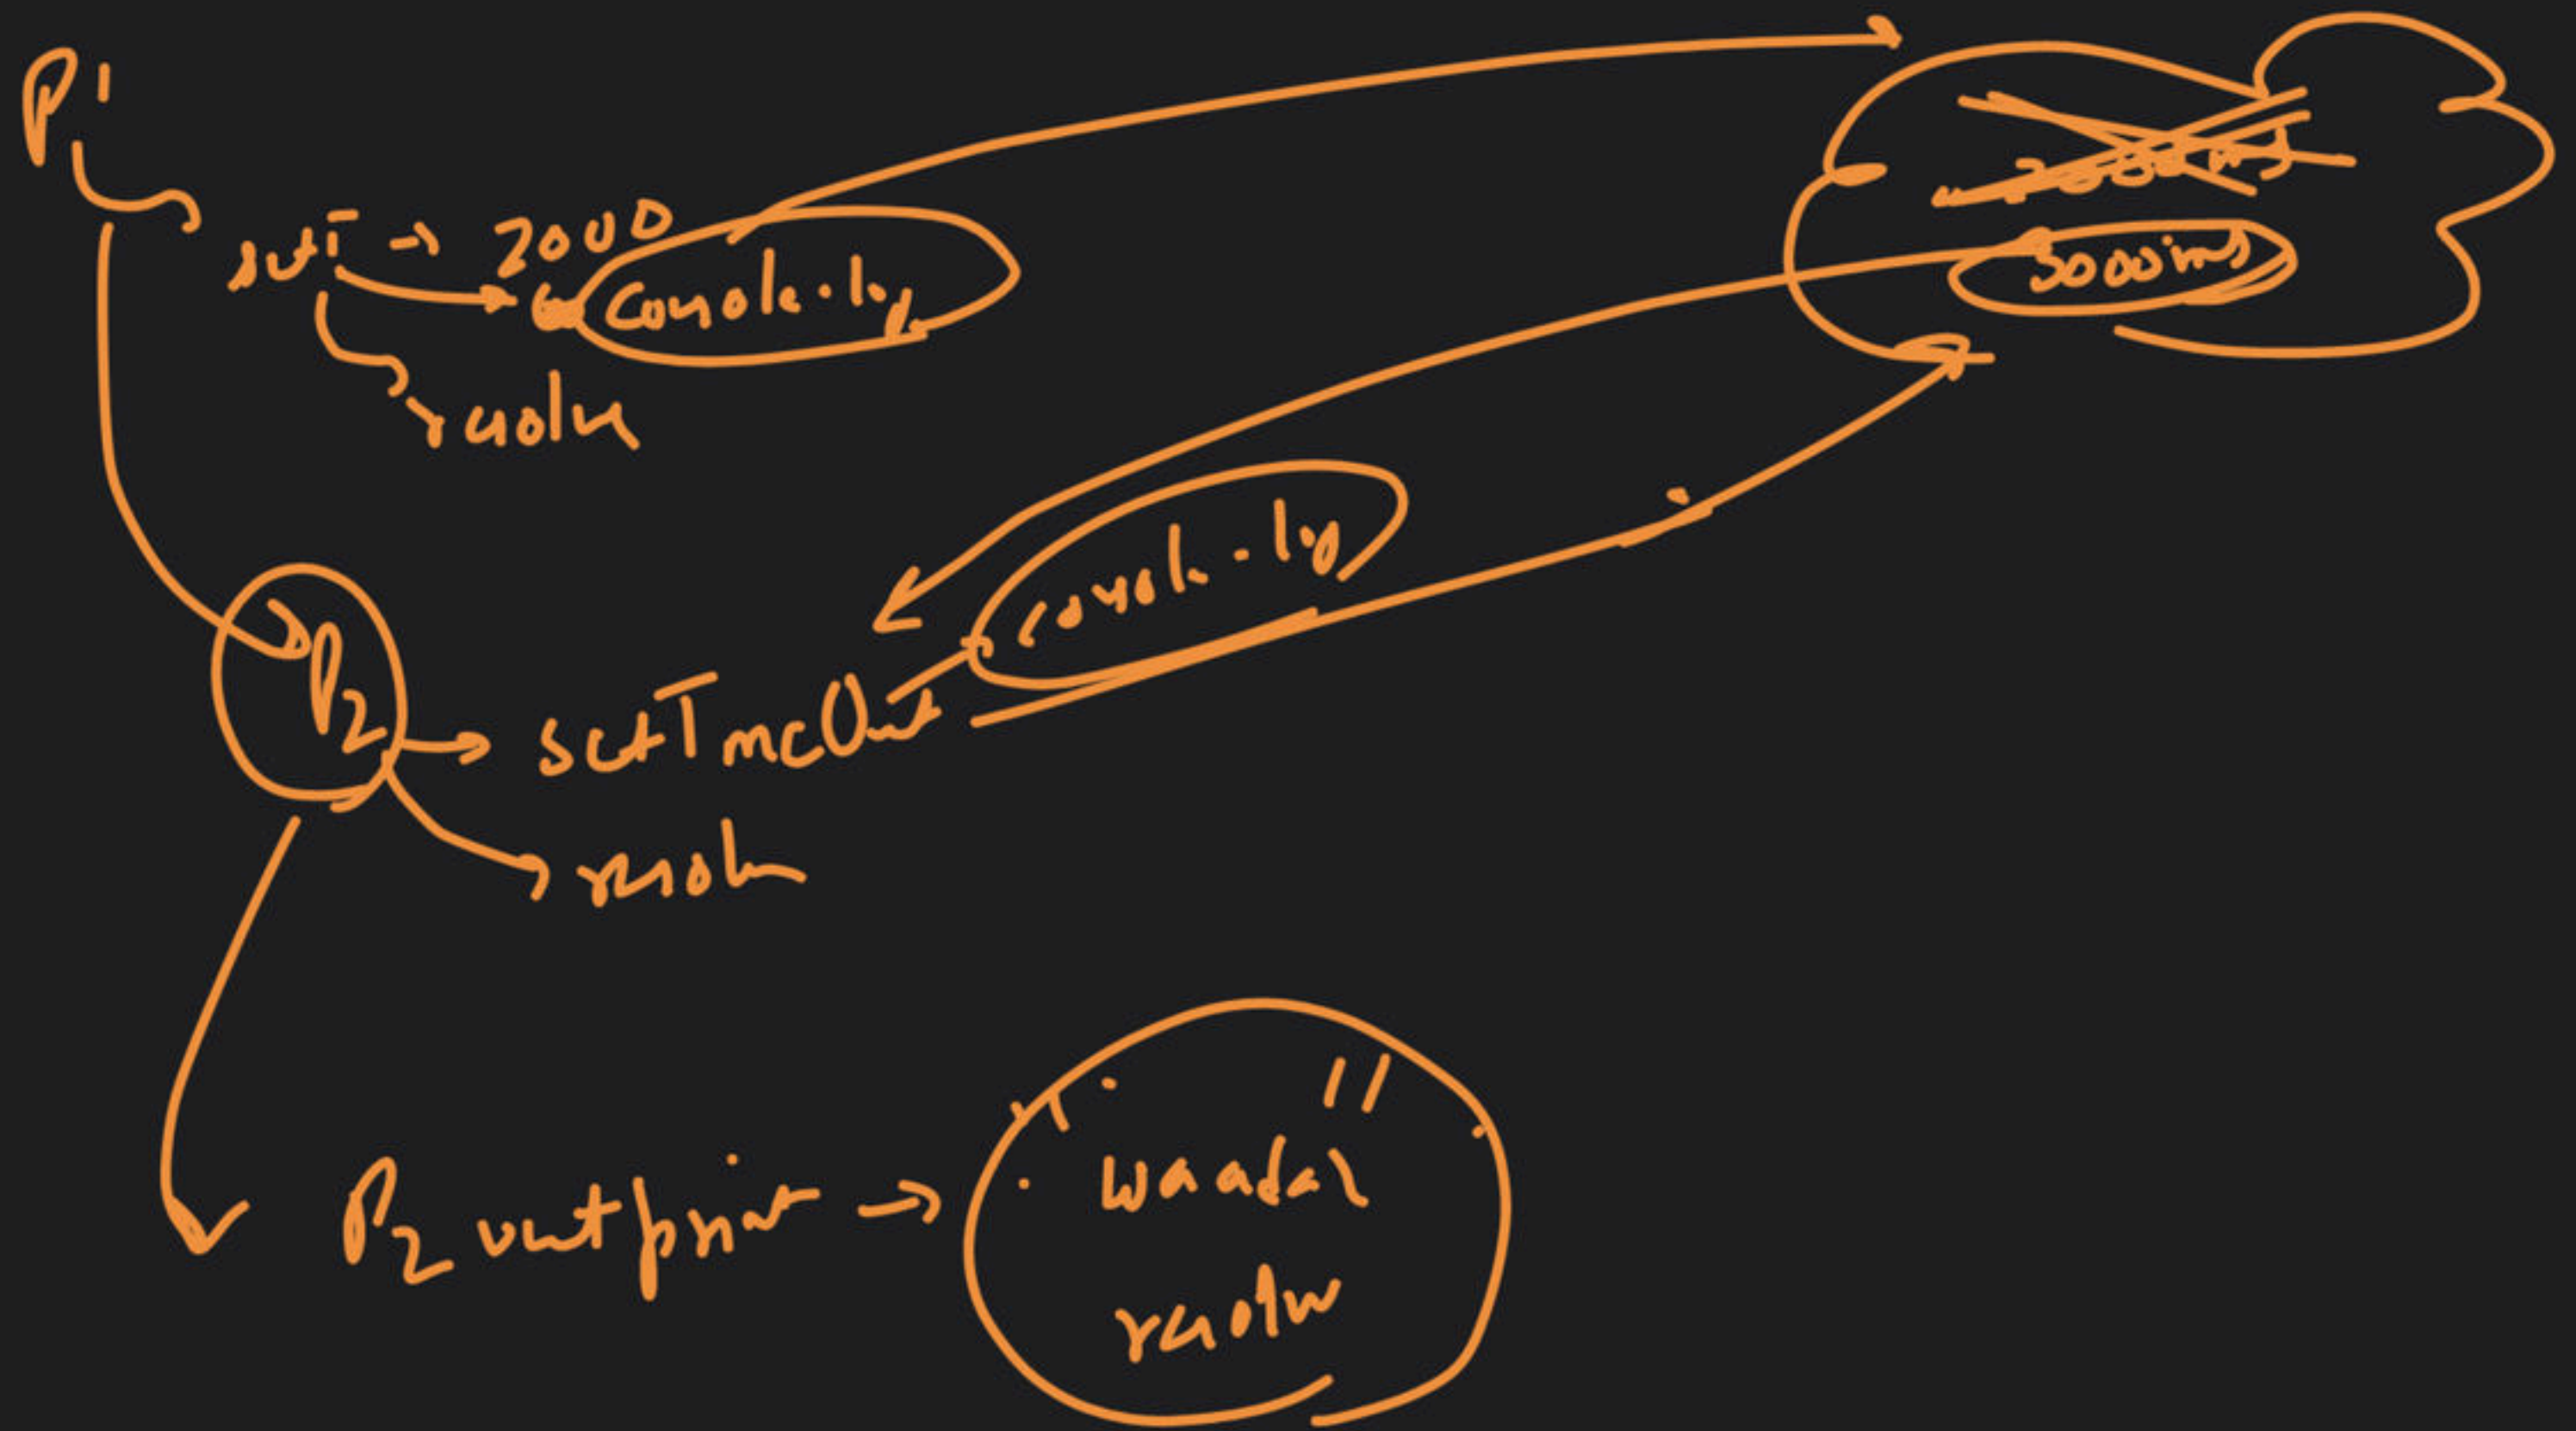

→ Find Out → H/W

let p1 = new Promise ((resolve, reject) => {

setTimeout ((val) => {
 console.log ("first");
 resolve (val);
});

resolve (true);

});

p1.then (()) => {

let p2 = new Promise ((resolve, reject) => {

resolve ("ABCD");

});

return p2 });

p3.then ((value) => { console.log (value);
 ABCD })

final

promise
chaining

setTimeout

first
p2

val

let p3

50 promises

50

then

!

p1

then p2

await p1

Async - await

rukna

wait karna

special syntax used to
work with promises

async function abcde() {

console.log("Bebek");
return 4;

}

D

free APIs

fetch API → get() → return

let a = fetch(
 url + auth + '');

a.status

a.ok

a.json()

a.text()

etc

~~let op =~~
let op = a.json();

console.log(op)

fetch (, [Options])

fetch (url,

```
{  
  header: {  
    authentication: secret key  
  }  
}
```

Closures:-

```
function abc() {  
  var name = "nyl";  
  function displayName() {  
    console.log(name);  
  }  
  displayName();  
}
```

init();

(var)

function

↳ function define ()

let name = "xyz";

func inner()

Control by (name)

return inner

$$\text{Let } a_n = \text{Soln}(n)$$

ans ()

avg ()

Definition

function

Solve ()

Let $nbrs = 6$
